

Support the Los Gatos HS Robotics Team!

Our Mission: "To build and foster a student-led environment where members develop the STEM, business, leadership, and collaborative skills crucial to innovation in society"

We are a student-led team that competes in the *FIRST* Robotics Competition. Each year we have six weeks to build an entire human-sized robot from scratch. Team 972 was founded with a strong belief in the importance of student leadership. All aspects of our team—designing, building our robot, training members, fundraising, and hosting outreach events—are coordinated by students.

The Problem:
Robotics is expensive

Approximated Total Cost:
\$60,000

\$28,000 for Competitions
\$21,000 for Mechanical Materials
\$10,000 for Operations Expenses
\$1,000 for Programming Costs
