

# Support the Los Gatos HS Robotics Team!

**Our Mission:** "To build and foster a student-led environment where students develop skills in STEM, leadership, business and collaboration - all crucial to drive innovation in society "

We are a student-led team that competes in the **FIRST Robotics Competition**. Each year we have six weeks to build an entire human-sized robot from scratch. We were founded with a strong belief in the importance of student leadership. All aspects of our team – designing, building, testing our robot, training members, fundraising, and hosting outreach events are coordinated by students. We have qualified for the **FIRST Championship in Houston** the past two years, and hope to qualify again this upcoming season.

## The Problem:

*We need to raise a lot of money as Robotics is expensive*

**Approximate Total Cost: \$60,000**

\$28,000	Competitions
\$20,000	Parts & Materials
\$10,000	Operations
\$2,000	Programming/CAD

**FIRST Championship Houston  
(if we qualify): \$50,000**
